

Eden Nursery Plant Care Guide

Watering:

For the first 2 weeks, water trees and large size plants every day for 30 minutes on a slow flow/ slow trickle directly from the hose (see example image below) and position the hose around the tree's base, after the first 2 weeks water them every other day for 2 additional weeks. Then proceed watering as needed based on the moisture level of the soil.

💡 Pro Tips! Best time to water: Early morning or late afternoon to prevent evaporation! For soil moisture, Keep soil consistently moist but not waterlogged. Check 1-2" depth daily.

☀️ **Ensure plants receive the appropriate amount of light!**

- Full sun: 6+ hours/day
- Partial sun/shade: 3-6 hours/day
- Shade: Less than 3 hours/day

💡 Pro Tips! You can rotate potted plants every few weeks to ensure even growth and avoid the plant leaning toward light sources. For indoor plants, clean leaves monthly to remove dust and improve light absorption. Group plants with similar water/light needs together. Use a moisture meter or finger test to avoid overwatering.

Maintenance:

Watering: Reduce to 3x per week, adjusting for plant type and weather. Ensure containers have **drainage holes** to prevent root rot.

- Be sure to maintain airflow around plants to prevent fungal issues like powdery mildew.

Fertilizing: Apply slow-release fertilizer (optional) after week 3.

Pest and Disease Prevention: Inspect plants weekly for pests like aphids, spider mites, or scale insects. Treat infestations early! It is of the most importance to maintain airflow around plants to prevent fungal issues like powdery mildew.

Pruning & Deadheading:

Prune only dead/damaged parts - if you are wanting to prune the plants into a better shape, do not shape until plant is established.

- **Remove only dead or yellowing leaves** regularly to encourage healthy growth. If you are wanting to prune the plants into a better shape, do not do this until the plant is established.
- Deadhead (remove faded flowers) to **promote continuous blooming**.

Need help with pests that have gotten on the plant since purchasing? We recommend 'A Premier' Pest Control! You can reach Gary with A Premier at 727-538-9954.
